

Case Study – Module 2 Regeneration (Part 2)

Methods in Neurobiology

Overview

In this assignment you will be paired with another student and ask to analyze their work from Part 1 (Module 11). This is a 20-point assignment.

Instructions

Once paired with another student, review your coworker's project illustrated in Part 1. The review will have to include:

- An initial sentence/paragraph to summarize the project you are reviewing.
- Then answer the following questions using at least 1-2 sentences/point:
 - Do you think that their research plan is scientifically sound and appropriate? Why?
 - Is there another experimental way or more to solve their scientific question? If yes, illustrate your method/s. If no, explain why.
- Please include references. Again your work should be about 1 page long plus citations.
